

Hoenn's Last Wish - Main Story Bible

Purpose and canon notation

This document is a writer-facing overview of the main story through the player's first defeat of Champion Stella. It organizes the existing narrative into chronology, dramatic acts, character arcs, relationships, revelations, and unresolved continuity questions.

The following labels are used where necessary:

- Established: directly stated or depicted in the intended player-facing story.
- Strong implication: not stated outright, but consistently supported by multiple events.
- Canon decision needed: the current scripts leave an important question unanswered or contain conflicting versions.
- Legacy text: dialogue inherited from Emerald that conflicts with the intended characters or plot and should not be treated as canon.

1. Story premise

Hoenn is living inside a repaired but unstable reality created by the player's wish.

The ruined world seen in the prologue is the player's original reality, not merely a possible future. Groudon and Kyogre devastated the region, cities were flooded or consumed by volcanic destruction, wild Pokemon became dangerously aggressive, normal civilization collapsed, and even Poke Balls ceased to exist. After restoring enough temporal flow to reach Jirachi, the player uses the opportunity created by the Millennium Comet to wish for the world to be restored. Jirachi and Celebi act on that wish and create the partially repaired reality where most of the game takes place.

The wish does not perfectly erase or heal what came before. The original broken reality survives in the structure of time, and its accumulated grief leaks into the restored world through memories, dreams, and nightmare rifts. Most people in the repaired present believe the Millennium Comet was simply an extraordinary celestial event. A small number of researchers, mystics, and unusually sensitive people recognize that it changed reality. Professor Acacia sends the player and their rival to investigate. Luka experiences strange dreams and follows every lead connected to the comet. Calendula studies meteorite energy. Aurora treats the comet as a savior and searches for someone with the "gift" to heal the damage the wish left behind.

At the same time, Team Magma and Team Aqua pursue Groudon and Kyogre. Their ideological conflict appears to be the central human threat, but both organizations are secretly being financed and manipulated by Mr. Stone and Devon Corporation. Mr. Stone wants the teams to locate the ancient titans and the Red and Blue Orbs. Once both sides have served their purpose, he intends to seize the titans' power and use it to control land, oceans, resources, shipping, and ultimately governments.

The player begins in the ruined original world, helps Celebi restore temporal flow, reaches Jirachi, and makes the wish that creates the main game's reality. Awakening there as a new Trainer, the player becomes an investigator into the comet, discovers an ability to remember and repair broken timelines, survives the nightmare rifts, exposes the struggle surrounding the titans, and ultimately saves Hoenn from the Primal forms of Groudon and Kyogre. The journey concludes with the player defeating Mr. Stone's granddaughter, Stella, and becoming Champion.

2. Central dramatic question

The story repeatedly contrasts two ways of changing the world:

- Control: Mr. Stone, Team Magma, and Team Aqua try to impose a preferred future through wealth, ideology, technology, and divine power.
- Restoration through relationship: the player succeeds by helping individuals, forming bonds with Pokemon, accepting help, and repairing what others tried to dominate.

The core dramatic question is therefore not simply whether Hoenn will survive. It is:

Will the future be dictated by those powerful enough to reshape the world, or protected by people willing to understand and care for it?

3. Cosmology and story rules

The original titan conflict

Groudon represents the land and Kyogre represents the sea. Their ancient struggle created earthquakes, eruptions, floods, and tsunamis. Their powers are not inherently evil, but they are too vast to be safely controlled by human ambition.

Rayquaza is the balancing force. It does not belong to either human faction and acts when the conflict between land and sea threatens the region as a whole.

The Millennium Comet

The comet is connected to Jirachi's awakening, temporal instability, meteorite fragments, and the wish that creates the partially restored reality.

The current story supports two simultaneous interpretations:

- Researchers such as Acacia and Calendula regard it as a reality-altering phenomenon that can be studied through residual energy.
- Aurora regards it in spiritual terms as a savior that enabled the player's wish to reverse the course of ruin.

The comet should not necessarily be treated as a conscious moral agent. It may be the event that opens a temporal window and makes intervention possible, while characters interpret that event according to their own beliefs.

The original broken reality

The ruined version of Mossdeep is the world the player originally belongs to. Jirachi and Celebi first address the player in the Dream Realm, but Celebi then sends them back to their own broken world so that they can help restore it. The events in ruined Mossdeep are therefore history, not a hypothetical vision:

- The player's grandparents explain the collapse of Hoenn.
- The player encounters their rival and Luka in that future.
- The player collects the Time Gears of the Past, Present, and Future.
- Celebi restores enough temporal flow for the player to reach Jirachi.
- The player makes a wish as the Millennium Comet approaches.
- Jirachi and Celebi use that wish to create the partially restored reality.

The original broken world is not cleanly erased. Its suffering remains embedded in time, allowing it to intrude upon the repaired world through temporal echoes and nightmare rifts.

The gift

The player possesses a rare sensitivity Aurora calls "the gift." It allows the player to:

- Enter spaces between dreams and reality.
- Perceive temporal damage that most people cannot perceive.
- Borrow the power associated with Jirachi and Celebi.
- Enter nightmare rifts.
- Purify or sever a rift's connection to the present.
- Retain memories of timelines that have been restored.

The gift does not automatically make the player capable of succeeding. Aurora tests the player's strength because entering a rift without the will and skill to survive it would be useless or fatal.

Memory after restoration

When a damaged portion of history is restored, people without the gift remember the corrected reality rather than the crisis that was replaced. The gifted retain awareness of what happened.

Luka's strange dreams suggest that non-gifted people may still receive incomplete temporal echoes. These are impressions rather than coherent memories.

Time Gears

Time Gears stabilize temporal flow. The three prologue gears embody Past, Present, and Future. A depleted Time Gear also anchors Nightmare Petalburg. Turning it after defeating Dark Suicune gives Celebi the opening needed to restore that part of the timeline.

Nightmare rifts

Nightmare rifts are places where the suffering of the player's original broken reality leaks into the restored world. They are not conventional alternate dimensions. They are wounds left by the incomplete wish.

Their inhabitants are concentrated manifestations of trauma:

- Dark Suicune guards the distortion affecting Petalburg.
- Shadow Celebi and Shadow Jirachi embody the accumulated grief and destruction of the original broken reality.

Defeating a shadow manifestation suppresses the active corruption. A legendary or Time Gear must still stabilize the boundary.

4. Factions and competing goals

Team Magma

Team Magma wants to expand the land and create what it considers a stronger or purer future. Its members interpret volcanic and terrestrial power as instruments of human progress. Magnus leads the organization; Netsu is a major administrator.

Magma steals a comet-linked Meteorite, attempts to manipulate Mt. Chimney, steals one of the sacred Orbs, awakens Groudon with the wrong Orb, and later attacks Mossdeep Space Center for rocket fuel.

The organization believes it is pursuing its own ideology, but Devon has been supplying resources and false research designed to push it toward Groudon.

Team Aqua

Team Aqua wants to expand the sea and believes oceanic power can be used to create a better world. Inae is the principal leader in the intended story. Alejandro acts as a senior captain and operational commander.

Aqua's activities include:

- Attacking Devon personnel.
- Occupying the Oceanic Museum.
- Seizing an abandoned ship and key shipping lanes.
- Corrupting Seabreeze Shipping.
- Occupying the Weather Institute.
- Stealing an Orb from Mt. Pyre.
- Stealing Captain Stern's submarine.
- Entering Seafloor Cavern and awakening Kyogre with the wrong Orb.

Their shipping campaign provides the logistical foundation for moving personnel, equipment, and ancient materials throughout Hoenn.

Devon Corporation

Devon initially appears to be a benevolent technology company repeatedly victimized by Team Aqua and Team Magma. Mr. Stone helps the player, provides useful technology, and requests seemingly innocent deliveries. Later evidence suggests that several of the apparent attacks against Devon were facilitated from within so that the company could supply the teams while preserving its public image as their victim.

The truth is that Mr. Stone has funded and manipulated both teams. Devon's actual strategic goals are:

1. Encourage Aqua and Magma to locate the titans and Orbs.
2. Supply both factions with enough resources to continue without allowing either to achieve stable control.
3. Let their conflict expose every site and technology Devon needs.
4. Seize both Orbs once the titans are active.
5. Use Groudon and Kyogre to monopolize geography, energy, minerals, water, and trade.

Devon's operational trail is gradually exposed:

- The Devon employee is attacked immediately after leaving the lab, despite unauthorized intruders rarely getting through Devon security.
- The Aqua thief says the Devon Goods robbery was supposed to be easy because everything had been "lined up."
- Captain Stern is unexpectedly drawn to the Oceanic Museum by news of a discovery, and Aqua knows precisely where to intercept him.
- Alejandro says the museum operation had been carefully arranged.
- Seabreeze Shipping records show that Devon is its largest importer and primary source of income.
- A cargo entry for 600 DexNavs has been altered to 1,200.
- Shipping destinations are encoded.
- Seabreeze records payments to clients labeled "MGMA" and "AQA."
- An Aqua grunt identifies the Seabreeze president as a puppet installed by an unnamed sponsor.

Strong implication: Mr. Stone uses Seabreeze and compartmentalized intermediaries to finance and equip both teams. His gifts and friendly requests also allow Devon to observe the player, the teams, Stella, and comet-related sites while maintaining plausible deniability.

5. Complete chronological timeline

Era I - Ancient history

1. Groudon and Kyogre shape the land and sea.
2. Their competing powers erupt into a catastrophic conflict.
3. Rayquaza becomes the force capable of ending or suppressing their struggle.
4. The Red and Blue Orbs become associated with the titans and their transformations.
5. Communities build shrines, preserve legends, and eventually safeguard the Orbs at Mt. Pyre.

6. Jirachi and Celebi become part of Hoenn's mythology surrounding wishes, time, and the possibility of changing fate.

Era II - The player's original broken reality

1. In the player's original reality, the balance fails and Groudon and Kyogre devastate Hoenn.
2. Flooding, volcanic activity, earthquakes, and uncontrolled wild Pokemon destroy normal civilization.
3. Mossdeep becomes a broken refuge populated by survivors.
4. Poke Balls and the ordinary Trainer system no longer exist.
5. Luka and the player's rival survive in this future and help protect others.
6. Celebi becomes trapped while temporal flow collapses.
7. Jirachi sleeps while the Millennium Comet approaches.
8. The Time Gears of Past, Present, and Future become scattered across ruined Mossdeep.

Prologue - Wishing for a restored world

1. Jirachi and Celebi introduce the history of Groudon and Kyogre in the Dream Realm.
2. The player accepts or skips the playable prologue. The event remains part of the story's historical foundation even if the player skips its gameplay.
3. Celebi tells the player that they will soon return to their world: the broken reality they must restore.
4. In ruined Mossdeep, the player's grandparents describe Hoenn's destruction and give the player a Shiny Charm.
5. The player has no Pokemon and is attacked by a hostile Mightyena.
6. The rival gets the player back to safety.
7. The grandparents direct the player to Luka, whose Pidgeot can protect a route through the dangerous wild Pokemon.
8. Luka and Pidgeot hold the wild Pokemon back.
9. The player collects the Time Gear of the Past from the grass, the Time Gear of the Present from the rocks, and the Time Gear of the Future from the water.
10. The player frees Celebi. Celebi restores local temporal flow, calms the wild Pokemon, and calls a Wailord to create a crossing.
11. Celebi explains that repairing local time is not enough and directs the player toward the wish Pokemon.
12. The player reaches Jirachi with Celebi and all three gears.
13. The Millennium Comet approaches, creating a single opportunity to change reality.
14. Jirachi tells the player to make a wish.
15. The player's wish, carried out through Jirachi and Celebi, creates the partially restored reality where the main game occurs.
16. The player awakens in that repaired world with the experience framed as dreamlike, but later rifts confirm that the original broken reality and its consequences remain real.

Act I - A changed reality

Littleroot and Route 101

1. The player begins ordinary life in the partially restored reality created by their wish.
2. The player meets Zinnia or Zenno, the gender-dependent rival.
3. Professor Acacia is chased by a Sentret on Route 101.
4. The player chooses a starter and rescues her.
5. Acacia recognizes the player's potential and allows them to keep the starter.
6. The player battles the rival on Route 103.
7. The rival reveals an interest in the comet and Acacia's investigation.
8. Acacia gives the player a Pokedex and Town Map.
9. Acacia explains her belief that the Millennium Comet changed reality.
10. She sends both young Trainers into Hoenn to gather evidence.
11. Acacia directs the player toward Calendula, her research and romantic partner, who now leads the Petalburg Gym.

Dramatic function: The adventure begins as scientific fieldwork rather than a conventional Badge quest. The Gym journey provides the player with strength and access while the comet mystery supplies the real narrative objective.

Petalburg and Luka

1. Calendula introduces the player to Luka.
2. Luka is already investigating the comet and suffering from strange dreams.
3. Luka experiences an immediate sense of familiarity when looking at the player and wonders whether their meeting was fated.
4. Luka battles the player on Route 102. The story continues regardless of the result.
5. Calendula gives the player an Eevee Egg and Everstone.
6. She refuses an official Gym challenge until the player earns four Badges.

Dramatic function: Calendula becomes the player's distant benchmark, while Luka is established as a second kind of rival: less concerned with surpassing the player than with proving himself and understanding the comet. Luka's unexplained familiarity is the first sign that emotional traces of the original reality survived the wish.

Petalburg Woods and Rustboro

1. Two Aqua grunts attack a Devon employee in Petalburg Woods.
2. The player defeats them and receives an Ability Patch.
3. The incident presents Devon as a victim and Team Aqua as the immediate threat.
4. The player reaches Rustboro and defeats Gym Leader Terra.
5. Luka meets the player outside the Trainer School. He has been trying to reach Verdanturf and researching the comet, but Rusturf Tunnel is still closed and the school contains no useful comet information.
6. Luka recommends the school to the new Trainer and continues his own journey.

7. A thief attacks the Devon employee immediately after he leaves the lab, steals the Devon Goods, and flees toward Route 116.
8. The employee notes that it is unusual for anyone unauthorized to get through Devon security.
9. The player pursues the thief into Rusturf Tunnel.
10. The Aqua grunt says the theft was supposed to be easy because everything had been lined up.
11. The player defeats the grunt, recovers the Devon Goods, and rescues Mr. Briney's Nami.
12. The Devon employee gives the player an Ability Capsule and introduces them to Mr. Stone.
13. Mr. Stone asks the player to deliver a Letter to Stella and the Devon Goods to Captain Stern.
14. He gives the player the DexNav.
15. The rival challenges the player in Rustboro and gives them the Exp. Share after losing.
16. Mr. Briney agrees to sail the player to Dewford.

Dramatic function: Luka remains active between his major battles instead of disappearing from the route. Mr. Stone recruits the player under the guise of gratitude, while the timing of the robbery and the unlikely security breach quietly suggest that Devon's apparent victimhood may be staged. Stone's generosity makes the later betrayal personal and credible.

Act II - Omens beneath the ordinary journey

Dewford, Aurora, and Stella

1. Aurora blocks the way into Granite Cave.
2. She claims the comet granted her visions and power.
3. She senses unusual energy in the player and challenges them.
4. After losing, she warns of a coming crisis and gives the player Flash.
5. The player defeats Renton and earns the right to use Flash.
6. Inside Granite Cave, Team Magma searches ancient areas associated with rare minerals and old power.
7. The player defeats the Magma members and reaches Stella.
8. Stella initially suspects the strangely dressed player may be connected to Magma.
9. The player delivers Mr. Stone's Letter.
10. While reading it, Stella asks why her grandfather wants her to do something, then catches herself and refuses to explain further.
11. Stella gives the player TM Steel Wing.
12. She shows the player an ancient image of the land and sea titans.
13. Stella wonders whether the painting, Team Magma, and the comet are connected.
14. If the player reports back, Mr. Stone rewards them with a Shiny Stone.

Dramatic function: Aurora establishes the supernatural interpretation of the comet. Stella establishes the archaeological interpretation. Her reaction to the Letter introduces the first personal unease around Mr. Stone while he remains publicly positioned as a helpful patron.

Slateport and Mauville

1. Captain Stern unexpectedly goes to the Oceanic Museum after receiving word of a remarkable new discovery.

2. The player finds him there and delivers the Devon Goods.
3. Team Aqua arrives already knowing where Stern and the Goods will be.
4. The player defeats the grunts.
5. Alejandro admits the operation had been carefully arranged, states Aqua's maritime ideology, and withdraws.
6. The player battles the rival on Route 110 and receives the Dowsing Machine.
7. In Mauville, Luka asks for another battle while arguing with his uncle about challenging the Gym.
8. Luka loses and admits that he could not stop thinking about his dreams, causing him to prioritize research and neglect training.
9. Luka resolves not to let the dreams control his entire life and recognizes that understanding the comet will require the support of stronger Pokemon partners.
10. The player defeats Den and continues west.
11. The player obtains Rock Smash and later Strength through the Rusturf Tunnel reunion.

Dramatic function: Aqua's interest expands from theft to control of the sea. Stern's convenient diversion and Aqua's advance knowledge add another sign of a hidden organizer. Luka's research obsession now produces a genuine personal setback, and his defeat becomes the moment when he begins balancing investigation with partnership and training.

Meteor Falls and Mt. Chimney

1. Team Magma steals a Meteorite fragment connected to the Millennium Comet.
2. Magma believes the fragment carries a memory of a lost or forgotten world.
3. Team Aqua arrives and pursues Magma, presenting itself as the faction preventing a greater disaster.
4. Inae warns the player that the stakes are beyond ordinary League battles.
5. Calendula reveals that the grunts tried to seize her research.
6. She detects unexplained comet-related energy in the meteorite and cavern walls.
7. Calendula leaves to compare her samples with data at Mossdeep Space Center.
8. On Route 112, Acacia approaches the player after her instruments react violently in the direction of Mt. Chimney.
9. Acacia believes Aqua and Magma's conflict is producing an unknown destabilization and returns to her lab to record the readings.
10. At Mt. Chimney, the player defeats Netsu.
11. The player defeats Magnus at the meteorite machine.
12. Magnus fails to reshape the volcano as intended.
13. The player removes the Meteorite.
14. The player defeats Amaterasu in Lavaridge.
15. The rival gives the player the Go-Goggles, opening the desert route.

Dramatic function: The human factions make their first direct attempt to weaponize comet-related material. Calendula's research and Acacia's field readings create the intended bridge between the scientific mystery, the villain plot, and the destabilization of the repaired reality.

Act III - The first present-day rupture

Petalburg's disaster

1. After the fourth Badge, the player returns to find Petalburg under unnatural rain and earthquakes.
2. Calendula has left after receiving a mysterious letter promising answers in Phoenix Town.
3. The Petalburg Gym is closed while the crisis continues.
4. The player crosses the desert to Phoenix Town.
5. Calendula, Luka, and the rival are waiting there.
6. Luka states that every lead he has followed connects the comet to the unnatural events.
7. Aurora reveals that she sent the letter.
8. Aurora senses no malice or greed in the group and promises to help.
9. Aurora describes the comet as a savior that enabled the world to escape the path of ruin.
10. She explains that repairing a broken reality inevitably leaves echoes.
11. Aurora recognizes that Luka and the rival are more temporally sensitive than most people, but neither possesses the extraordinary gift required to borrow Celebi and Jirachi's power.
12. She senses the full gift in the player but explains that the gift alone does not guarantee survival inside the nightmare.
13. The player defeats Aurora and proves they possess both the gift and the strength to withstand the darkness.
14. Calendula sends Luka and the rival back to help protect Petalburg while the player follows Aurora.

Aurora Grove

1. The player passes through Phoenix Cave into Aurora Grove.
2. Aurora explains that the Grove exists between dreams and reality.
3. Entry confirms that the player can interact with damaged timelines.
4. Aurora explains that Jirachi and Celebi carried out the player's wish, but the restoration was not complete or all-powerful.
5. The current timeline is fraying and nightmare energy is leaking through it.
6. Aurora admits that she possesses knowledge and only a diluted version of the player's potent gift, explaining why she cannot heal the rifts herself.
7. Aurora teaches the player how to borrow the legends' power and influence the world inside a nightmare so they can find and sever its connection.
8. She warns that restoring history will erase the event from the memories of people without the gift.
9. She predicts additional rifts.

Nightmare Petalburg

1. The player returns to Petalburg and reunites with Calendula, Luka, and the rival.
2. A new quake knocks the player unconscious and draws them into Nightmare Petalburg.

3. The nightmare presents a distorted local history, including signs of a world that does not know Luka.
4. Dark Suicune guards the temporal corruption.
5. The player defeats Dark Suicune and receives a Comet Shard.
6. Exploration can also reward the player with a Reaper Cloth and Rare Bone, reinforcing the nightmare's imagery of death and remains.
7. The player reaches the depleted Time Gear and turns it.
8. Celebi restores the damaged portion of the timeline.
9. Celebi reminds the player that most people will not remember what was changed.
10. The player awakens in restored Petalburg.
11. Luka and the rival explain that, from their perspective, the player suddenly collapsed just before entering the Gym and awakened moments later.
12. Neither remembers Nightmare Petalburg, but both felt an unexplained unease while the player was unconscious. Luka notices that the feeling vanished when the player awakened and leaves to ask whether anyone else sensed it; the rival resumes their journey.
13. Calendula's Gym becomes accessible.
14. The player defeats Calendula and receives the fifth Badge.
15. Luka's family gives the player Surf in gratitude for their influence on him.
16. Luka challenges the player outside and warns that Aqua and Magma are mobilizing again.

Dramatic function: The player stops being merely an investigator. They become the only active human guardian of the repaired timeline.

Act IV - The war for Hoenn's infrastructure

Abandoned Ship

1. Aqua blocks routes and occupies the Abandoned Ship.
2. The player uses Surf to reach it.
3. The player finds the keys needed to access the occupied rooms.
4. The ship's records reveal a focus on strategic transport routes.
5. The player defeats a grunt and confronts Inae.
6. Inae states that the ship is only one part of a larger operation.
7. Stella arrives after tracking the vessel for three days.
8. Inae refuses a two-against-one confrontation and withdraws, saying Aqua already obtained what it needed.
9. Stella explains that Aqua is seizing ports, supply lines, and major shipping lanes.

Cargo Ship and Seabreeze Shipping

1. Luka finds evidence of Aqua loading a cargo ship in Slateport.
2. The player and Luka board it.
3. Luka uses Pidgeot to distract a sailor and gain access to the hold.
4. The player finds the Seabreeze Shipping HQ Key Card.
5. Luka returns to report the discovery to Calendula.

6. The player uses the card to enter the restricted Seabreeze offices.
7. Aqua grunts occupy the building.
8. The player overhears Alejandro arranging disguised shipments with the company president.
9. An Aqua grunt reveals that the president is a puppet installed by an unnamed sponsor.
10. Shipping records identify Devon as Seabreeze's largest importer and primary source of income.
11. A cargo report shows that an entry for 600 DexNavs was recently changed to 1,200.
12. A list of shipping destinations has been encoded beyond recognition.
13. Financial records show payments to clients labeled "MGMA" and "AQA."
14. Alejandro reveals that a signal has already been sent to the team on Route 121.
15. Alejandro and the president escape.
16. The accountant Juan is forced to battle the player.
17. The exposure of Seabreeze breaks the immediate shipping operation and opens the eastern route.

Dramatic function: Aqua becomes a systemic threat rather than a collection of criminals. More importantly, the records transform Devon's involvement from vague foreshadowing into an evidence trail: Devon funds the intermediary, equipment totals are falsified, destinations are concealed, and money flows toward both villain teams without yet naming Mr. Stone as the architect.

Act V - The Orbs and the second temporal wound

Weather Institute, rival, and Fortree

1. Team Aqua occupies the Weather Institute to gain access to climate data and technology.
2. The player defeats the occupying administrator and frees the researchers.
3. The researchers offer the player Castform.
4. The rival challenges the player immediately afterward and gives them Fly.
5. Stella meets the player on Route 120.
6. She uses the Devon Scope to reveal an invisible Kecleon and gives the device to the player.
7. The player defeats Taka in Fortree.

Mt. Pyre

1. Aqua moves toward Mt. Pyre after the Seabreeze operation is exposed.
2. Magma secretly reaches the sacred site by another route.
3. Magnus tells the player that Aqua rushed to the summit without noticing Magma slipping away.
4. At the summit, the player battles through Aqua.
5. Inae escapes with one sacred Orb.
6. Magma has already taken the other.
7. The shrine keeper gives the player the Magma Emblem, allowing access to the hidden Jagged Pass base.
8. The keepers recount the legend of the chosen one beside statues of Jirachi and Celebi.
9. A temporal rift opens and pulls the player into the Nightmare Realm.

Nightmare Realm

1. Jirachi and Celebi are pursued by Shadow Jirachi and Shadow Celebi.
2. The true legends explain that the shadows are grief, loss, and devastation from the original broken reality given purpose and form.
3. The shadows recognize the player as the person capable of erasing them.
4. The player defeats both shadows in a forced double battle.
5. Jirachi and Celebi explain that the rift still requires anchoring from their side.
6. They describe time as a branching river rather than a single road.
7. The original ruined world cannot be made never to have existed, but its tragedy does not have to repeat in every branch.
8. The legends remain behind to guard the boundary.
9. The player returns to Mt. Pyre.

Dramatic function: The nightmare threat escalates from one corrupted city to direct attacks on the legendary beings sustaining the repaired world.

Act VI - Awakening the titans

Magma Hideout and Groudon

1. The player uses the Magma Emblem at Jagged Pass.
2. The hidden Magma base opens inside a former Devon mine.
3. The player unexpectedly finds Mr. Stone near the entrance.
4. Mr. Stone claims he is merely inspecting an old Devon property now occupied by dangerous criminals.
5. He quickly leaves, marking the clearest pre-reveal evidence of his hidden involvement.
6. The player fights through the base and defeats Netsu near the deepest chamber.
7. Magnus uses the wrong Orb to awaken Groudon.
8. Groudon escapes instead of obeying him.
9. Magnus blames the player, loses the ensuing battle, and leaves to pursue Groudon.

Submarine theft and Aqua Hideout

1. Captain Stern publicly discusses the discovery of an undersea cavern.
2. Team Aqua announces that it will seize the Explorer 1 submarine.
3. Aqua escapes with the vessel.
4. The player enters the Aqua Hideout near Lilycove.
5. The player defeats the administrator delaying pursuit.
6. The submarine escapes toward Seafloor Cavern.
7. The rival waits outside the Lilycove Department Store for a major battle.
8. After losing, the rival acknowledges the player's growth and returns to Littleroot to train.

Mossdeep Gym and Space Center

1. The player reaches Mossdeep and defeats Soul and Luna for the seventh Badge.

2. Team Magma attacks the Space Center for rocket fuel.
3. Calendula's Meteor Falls samples are being compared with the comet's flight data inside the facility.
4. The player fights through the occupying grunts.
5. Stella asks the player to join her in battle.
6. Together they defeat Magnus and Netsu.
7. Magnus questions whether both Magma's and Aqua's ideologies are fundamentally misguided.
8. Stella invites the player to her home.
9. Stella gives the player Dive and points them toward the undersea cavern.

Seafloor Cavern and Kyogre

1. The player dives on Route 128 and follows the stolen submarine into Seafloor Cavern.
2. The player navigates the cavern and defeats Aqua's defenders.
3. The player confronts Inae beside the sleeping Kyogre.
4. Inae loses but uses the wrong Orb to awaken Kyogre.
5. Kyogre escapes instead of obeying her.
6. An uncontrollable downpour begins.
7. Magnus arrives and recognizes that the two awakenings may destroy all of Hoenn.
8. Magma and Aqua abandon their immediate conflict and travel to Sootopolis.

Dramatic function: Both ideological leaders receive the same lesson: awakening a god is not the same as controlling it.

Act VII - The true architect and the end of the crisis

Groudon and Kyogre clash

1. Groudon and Kyogre converge in Sootopolis.
2. Their battle produces extreme weather and threatens the entire region.
3. Magnus and Inae are unable to make either titan respond to the Orbs they used.
4. Stella prepares to seek a legendary solution.

Mr. Stone's betrayal

1. The player approaches Mr. Stone at the southern riverbank.
2. Mr. Stone reveals that Aqua and Magma were never meant to win.
3. Devon funded both organizations and gave each side the resources and research needed to continue.
4. The teams' rivalry allowed Devon to locate the titans and both Orbs without openly accepting the risk.
5. Mr. Stone thanks Magnus and Inae for unknowingly acting as Devon's mercenaries.
6. He explains the Stone family's multigenerational obsession with minerals and ancient beings.
7. He reveals that Devon scientists deliberately taught the teams to use the wrong Orbs.
8. Mr. Stone dismisses Pokemon training and the League as insignificant beside power capable of reshaping continents.

9. He specifically belittles Stella's achievement as Champion.
10. He declares his intention to control land, water, energy, minerals, maritime routes, governments, and ultimately the world economy.
11. Mr. Stone boards a Devon boat with both Orbs.
12. He forces Groudon and Kyogre into their Primal forms.
13. Stone's attempt to command the Primal titans fails catastrophically.
14. A visual cutscene shows Mr. Stone being killed as a direct consequence of trying to control Groudon and Kyogre.
15. The disaster intensifies.
16. Magnus and Inae recognize that Devon exploited their ideals and that no human can control the titans.

Cave of Origin and Rayquaza

1. Stella leads the player to the Cave of Origin.
2. The ancient expert explains that a third legendary power is required.
3. The player learns that Rayquaza waits at Sky Pillar.
4. The player travels through Pacifidlog and climbs Sky Pillar.
5. The player awakens Rayquaza.
6. Rayquaza flies to Sootopolis.
7. Rayquaza confronts the Primal titans and ends their battle.
8. Groudon and Kyogre leave Sootopolis.
9. Normal weather returns.
10. Magnus and Inae accept that their schemes were insignificant beside the beings they tried to command.
11. They leave, intending to return the Orbs to Mt. Pyre.

Canon decision needed: Mr. Stone has both Orbs when he dies, but Magnus and Inae later possess and return them. A recovery event is required after Stone's death. The current story does not show whether the Orbs fall from the boat, wash ashore, survive in wreckage, or are recovered after Rayquaza's arrival.

Eighth Badge

1. The Sootopolis guide thanks the player and gives them Waterfall.
2. The player challenges Rio.
3. The player earns the eighth Badge and gains access to the Pokemon League.

Act VIII - The human conclusion

Ever Grande and Victory Road

1. The player reaches Ever Grande using Waterfall.
2. The rival demands one final test before the League.
3. After losing, the rival admits they are not yet ready for the Elite Four but promises to continue training.

4. Inside Victory Road, Luka challenges the player.
5. Luka's battle represents the culmination of his own effort to balance research, dreams, and training.
6. Luka loses but refuses to stop growing.
7. The player completes Victory Road.

Elite Four and Stella

1. The player defeats Tsubaki, Iara, Stark, and Daemon.
2. Stella awaits as Champion.
3. The player defeats Stella and becomes the new Champion.
4. The rival arrives moments too late to offer advice.
5. Professor Acacia arrives, evaluates the Pokedex, and congratulates the player.
6. Stella escorts the player into the Hall of Fame.

Canon decision needed: Stella's current Champion dialogue is largely inherited from Wallace and does not resolve her relationship with Mr. Stone. Her final battle should serve as the emotional conclusion of her arc and the thematic answer to her grandfather's philosophy.

6. Major character arcs

The player

Starting position: An ordinary young person from the original ruined reality, with no Pokemon and no apparent power to save their collapsing world.

External arc:

1. Helps Celebi restore temporal flow in the original ruined world.
2. Reaches Jirachi and makes the wish that creates the partially restored reality.
3. Becomes a Trainer by rescuing Acacia.
4. Accepts Acacia's investigation into the comet.
5. Grows through the Gym challenge and rival battles.
6. Becomes entangled in Aqua and Magma's conflict.
7. Is identified by Aurora as possessing the full gift.
8. Learns to enter and repair nightmare rifts left by the incomplete wish.
9. Protects Celebi and Jirachi from their shadows.
10. Discovers Mr. Stone's conspiracy.
11. Awakens Rayquaza and saves Hoenn.
12. Defeats Stella and becomes Champion.

Internal arc: The player moves from reacting to immediate danger toward consciously accepting responsibility for events nobody else can remember or fully understand.

Thematic function: The player changes the world without trying to own it. Their power comes from relationships, accumulated acts of help, and the willingness to carry memories others cannot.

Professor Acacia

Role: Professor, scientific instigator, mentor, and Calendula's partner.

Established involvement:

- Suspects the Millennium Comet changed reality.
- Gives the player and rival their investigative mission.
- Frames Pokedex fieldwork as a method of detecting what changed.
- Directs the player to Calendula.
- Investigates abnormal readings around Mt. Chimney.
- Recognizes that Aqua and Magma's conflict is creating an unknown destabilization.
- Returns after the Champion battle.

Arc: Acacia begins as the first scientist willing to question consensus. Her faith in the player is vindicated when they uncover a crisis beyond conventional research and become Champion.

Current weakness: Her Route 112 investigation keeps her active during the middle story, but she still does not deliver a major discovery or participate in the climax.

Best payoff: Acacia should connect Devon technology found across Aqua and Magma operations, while Calendula connects the comet energy and temporal rifts. Together they can expose the human and supernatural halves of the conspiracy.

Calendula

Role: Petalburg Gym Leader, researcher, Acacia's partner, mentor, and protective authority figure.

Established involvement:

- Introduces the player to Luka.
- Gives the player an Eevee Egg and Everstone.
- Sets four Badges as the threshold for challenging her.
- Researches unexplained changes in Meteor Falls.
- Is threatened by Magma for her research.
- Sends comet-linked samples to Mossdeep Space Center.
- Responds to Aurora's letter and the Petalburg disaster.
- Protects the city while the player follows Aurora.
- Becomes the fifth Gym challenge after the nightmare is repaired.

Arc: Calendula moves from testing the player's ordinary Trainer development to trusting them with a danger that conventional adults cannot confront. Her pride in the player is based as much on compassion as battle strength.

Current weakness: Her research reaches Mossdeep, but she does not personally announce the conclusion or participate in the climax.

Best payoff: Calendula should discover that meteorite and Orb activity correlates with the rifts, validating Acacia and explaining why Petalburg and Mt. Pyre become temporal fault points.

Luka

Role: Friend, secondary rival, comet investigator, and emotional bridge between the repaired world and the player's original broken reality.

Established involvement:

- Exists in both the original broken reality and the partially restored world.
- Uses Pidgeot to protect the player in the prologue.
- Experiences strange dreams after the comet.
- Feels an unexplained familiarity when meeting the player in Petalburg.
- Researches the comet obsessively.
- Searches the Rustboro Trainer School for comet information while trying to reach Verdanturf.
- Battles the player in Petalburg, Mauville, after the fifth Gym, and in Victory Road.
- Admits in Mauville that his dreams drove him to neglect training.
- Resolves to stop letting the dreams control his life and rely more fully on his Pokemon partners.
- Accompanies Calendula and the rival to Phoenix Town.
- Trusts the player when Aurora selects them.
- Watches over the player after their collapse outside the Petalburg Gym, senses the nightmare's residual unease, and investigates whether anyone else noticed it.
- Discovers Aqua's cargo ship operation.
- Helps the player infiltrate the ship and find the Seabreeze Key Card.

Arc: Luka initially tries to prove himself through bravery and battle while being pulled toward the comet mystery by dreams and a familiarity with the player he cannot explain. His fruitless search at the Trainer School demonstrates how thoroughly the mystery occupies him. His Mauville defeat forces him to admit that the dreams have begun controlling his life and that research cannot replace training or partnership with his Pokemon. His investigation then becomes genuinely useful during the Aqua shipping arc. At Victory Road, he is no longer asking whether he is worthy to begin; he is measuring how far he has come.

Strong implication: Luka's dreams are temporal echoes of the ruined branch and his role there.

Best payoff: His Victory Road scene should acknowledge that the dreams led him here and either stopped after Rayquaza restored balance or changed into a hopeful vision of Hoenn's future.

Zinnia or Zenno - the rival

Role: Peer, recurring battle rival, Acacia's field assistant, and witness to the player's growth.

Established involvement:

- Helps Acacia gather Pokedex data.
- Shares the comet investigation.
- Exists in the original broken reality and rescues the player after the Mightyena attack.
- Battles the player on Route 103, in Rustboro, Route 110, Route 119, Lilycove, and Ever Grande.

- Travels with the player to Dewford.
- Gives the player the Exp. Share, Dowsing Machine, Go-Goggles, and Fly at key stages.
- Joins Calendula and Luka in Phoenix Town.
- Questions whether Aurora can be trusted.
- Watches over the player after their collapse outside the Petalburg Gym and admits to sharing Luka's unexplained unease before continuing the journey.
- Returns after the Champion battle.

Arc: The rival begins as an enthusiastic research peer and friendly competitor. As the player becomes involved in dangers the rival cannot enter, competition gives way to respect. The Ever Grande loss forces the rival to accept that they are not yet ready for the League without abandoning the desire to improve.

Current weakness: The rival is present at important transitions but has little direct effect on the late crisis.

Best payoff: Give the rival a concrete action during Sootopolis-evacuating residents, delivering Acacia's evidence to Stella, or coordinating transport-so their research journey contributes to the resolution.

Aurora

Role: Mystic, prophet, gatekeeper of the gift, and interpreter of the Millennium Comet.

Established involvement:

- Feels called or empowered by the comet.
- Receives visions of a coming crisis.
- Senses unusual energy in the player at Granite Cave.
- Gives the player Flash after testing them.
- Sends Calendula the letter leading the group to Phoenix Town.
- Calls the comet a savior.
- Explains that repaired realities inevitably retain echoes of their tragedy.
- Recognizes lesser temporal sensitivity in Luka and the rival.
- Identifies the player as gifted.
- Tests whether the player has the strength to survive the rifts.
- Brings the player to Aurora Grove.
- Reveals that she has extensive knowledge but only a diluted version of the gift.
- Teaches the player how to borrow Jirachi and Celebi's power and influence nightmare spaces.
- Warns that restored events will be forgotten.

Arc: Aurora begins with certainty: she believes the comet has shown her the path and that the gifted must follow it. Her more compassionate assessment of the group establishes that she is testing capacity rather than moral worth. Selecting the player turns her from remote prophet into teacher, while admitting her diluted gift explains why knowledge alone cannot make her the story's savior.

Current weakness: Her arc ends immediately after she grants the ability, so her beliefs are never tested by the climax.

Best payoff: Aurora should return after the Nightmare Realm or Sootopolis and recognize that the comet offered a possibility, not a guaranteed salvation. The player's choices completed what prophecy could not.

Jirachi

Role: Wish-granting legendary, narrator of the ancient disaster, and one of the two anchors of the repaired timeline.

Established involvement:

- Introduces the titan conflict and the possibility of changing fate.
- Sleeps in the original broken reality until the player frees Celebi and collects the Time Gears.
- Tells the player that the approaching Millennium Comet provides their single opportunity to make a wish.
- Uses the player's wish and the Millennium Comet to help create the partially restored reality.
- Appears in the Nightmare Realm under attack from its shadow counterpart.
- Explains that Hoenn's fate is made from many interconnected temporal threads.
- Remains behind to anchor the rift.

Arc: Jirachi moves from the seemingly limitless mythology of wish fulfillment to an admission that even legendary power has limits. A wish can open a future, but people must sustain it.

Celebi

Role: Guardian of temporal flow, guide through restoration, and one of the two anchors of the repaired timeline.

Established involvement:

- Is trapped in the original broken reality.
- Requires the three Time Gears to restore local flow.
- Calms wild Pokemon and creates the path to Jirachi.
- Explains that restoring local time is not enough and directs the player toward the wish Pokemon.
- Restores Nightmare Petalburg after the player defeats its guardian and turns the Time Gear.
- Warns that restoration changes memory.
- Appears in the Nightmare Realm under attack from its shadow counterpart.
- Explains that time is a branching river.

Arc: Celebi embodies the cost of restoration. Repair does not mean erasing the moral reality of what occurred, and the player must carry memories the rest of the world loses.

Stella Stone

Role: Archaeologist and explorer, Devon heiress, recurring ally, Mr. Stone's granddaughter, and Champion of Hoenn.

Established involvement:

- Studies the titan painting in Granite Cave.
- Receives Mr. Stone's Letter, reacts uneasily to its request, and declines to explain it before giving the player Steel Wing.
- Tracks Aqua to the Abandoned Ship and confronts Inae.
- Warns that Aqua's control of shipping could silence the region.
- Encounters the player on Routes 118 and 120.
- Gives the player the Devon Scope.
- Fights beside the player against Magma at the Space Center.
- Gives the player Dive.
- Leads the player to the Cave of Origin.
- Directs the search toward Rayquaza and Sky Pillar.
- Is revealed by Mr. Stone to be his granddaughter and the Champion.
- Is dismissed by him as insignificant beside divine power.
- Serves as the player's final League opponent.

Arc: Stella begins as an independent explorer using her family's resources to understand the ancient world. She gradually becomes the player's most capable field ally. The revelation that her grandfather funded both teams turns the crisis into a personal betrayal, immediately followed by his death while attempting to dominate the titans. Her identity as Champion positions her to answer his belief that domination is greater than partnership.

Current weakness: The current Champion dialogue does not acknowledge her grandfather's betrayal and death, and the story does not show Stella confronting the consequences for her family or Devon.

Best payoff: Stella should battle the player partly to reaffirm what the title of Champion means after Mr. Stone mocked it. Her defeat should represent a hopeful transfer of responsibility rather than an unrelated League formality.

Mr. Stone

Role: Patron, hidden architect of the faction war, corrupt industrialist, and principal human antagonist.

Public face:

- Grateful Devon president.
- Victim of repeated Aqua thefts.
- Supporter of promising young Trainers.
- Concerned grandfather sending a letter to Stella.
- Provider of the DexNav and other rewards.

True involvement:

- Funds both Aqua and Magma.
- Supplies selective or false research.
- Uses intermediaries to stage or facilitate apparent attacks against Devon.
- Uses Seabreeze Shipping to conceal equipment, destinations, and payments to both teams.
- Arranges conditions that place the Devon Goods and Captain Stern where Aqua can intercept them.
- Uses the teams to find the titans and Orbs.
- Maintains ties to the mine containing Magma's base.
- Allows both groups to awaken the titans incorrectly.
- Takes both Orbs once the titans are exposed.
- Forces the Primal Reversions.
- Seeks economic and geopolitical control rather than ideological victory.
- Dies when his attempt to control Groudon and Kyogre turns against him.

Arc: Mr. Stone begins as the model of respectable power. Each apparent act of generosity deepens the player's participation in a system he controls. The suspicious Devon robbery, Stella's Letter, Stern's diversion, and Seabreeze's records gradually expose an invisible sponsor behind events while Stone retains plausible deniability. At Sootopolis, the mask drops: he regards people, factions, Pokemon, and even Stella as assets or obstacles. His attempt to impose ownership upon Groudon and Kyogre kills him, making his fate the final and irreversible consequence of his philosophy.

Thematic function: Stone is the purest embodiment of control. Magma and Aqua at least believe they are creating a better world; Stone believes ownership itself justifies his actions. His death demonstrates that overwhelming power cannot be converted into obedience merely through possession or wealth.

Magnus

Role: Leader of Team Magma and ideological antagonist manipulated by Devon.

Established involvement:

- Directs the theft of the comet-linked Meteorite.
- Attempts to use Mt. Chimney to reshape the region.
- Steals one Orb from Mt. Pyre.
- Awakens Groudon with the wrong Orb.
- Attempts to steal rocket fuel and erupt the volcano.
- Begins questioning Magma's ideology after repeated failures.
- Recognizes the danger after Kyogre awakens.
- Learns in Sootopolis that Mr. Stone used him.
- Accepts that the titans cannot be controlled.

Arc: Magnus moves from absolute ideological confidence to humiliation, doubt, and recognition of responsibility. His redemption is not complete, but he finally prioritizes preventing destruction over defeating Aqua.

Netsu

Role: Major Magma administrator and Magnus's committed subordinate.

Established involvement:

- Defends the Mt. Chimney operation.
- Helps protect the Magma Hideout and Groudon's chamber.
- Participates in the Space Center attack.
- Fights beside Magnus against the player and Stella.

Arc: Netsu functions as a measure of institutional loyalty. Where Magnus eventually questions the ideology, Netsu's story can show how the leader's change affects committed followers.

Current weakness: Netsu has little individual reaction to the collapse of Magma's worldview.

Inae

Role: Principal leader of Team Aqua and ideological antagonist manipulated by Devon.

Established involvement:

- Pursues Magma at Meteor Falls.
- Warns the player that the conflict concerns Hoenn's fate.
- Commands the occupation of the Abandoned Ship and shipping routes.
- Takes an Orb from Mt. Pyre.
- Reaches Kyogre in Seafloor Cavern.
- Awakens Kyogre with the wrong Orb.
- Recognizes the catastrophic result.
- Learns that Mr. Stone used both teams.
- Admits that no human can control the titans.

Arc: Inae initially presents Aqua as the necessary opposition to Magma while remaining convinced of her own superior vision. Her encounter with Kyogre proves that her ideology is equally dangerous. Mr. Stone's reveal strips away the last illusion that she controlled events.

Alejandro

Role: Senior Aqua captain and operational commander.

Established involvement:

- Leads the confrontation involving Captain Stern at the Oceanic Museum.
- Oversees Aqua's relationship with Seabreeze Shipping.
- Arranges disguised cargo movements through Slateport.
- Warns that the Route 121 phase is already underway.

Arc: Alejandro represents Aqua as an organized criminal and logistical network rather than only an ideological cult. He connects the early museum thefts to the later port, shipping, and Mt. Pyre operations.

Current weakness: The exact hierarchy between Alejandro and Inae should be stated clearly on their first appearances.

Groudon

Role: Ancient embodiment of terrestrial power.

Story movement: Mythic destroyer -> sleeping objective of Magma -> uncontrollable awakened titan -> unwilling instrument of Mr. Stone -> force calmed by Rayquaza.

Thematic function: Groudon demonstrates the difference between power and obedience. Awakening it never makes it belong to the person holding an Orb.

Kyogre

Role: Ancient embodiment of oceanic power.

Story movement: Mythic destroyer -> sleeping objective of Aqua -> uncontrollable awakened titan -> unwilling instrument of Mr. Stone -> force calmed by Rayquaza.

Thematic function: Kyogre mirrors Groudon and proves that Aqua's supposedly corrective ideology is no safer than Magma's.

Rayquaza

Role: Balancing legendary and final answer to the physical titan crisis.

Established involvement:

- Is identified through the Cave of Origin legend.
- Sleeps at Sky Pillar.
- Responds when awakened by the player.
- Ends the clash between Primal Groudon and Primal Kyogre.

Thematic function: Rayquaza is balance rather than ownership. It intervenes without becoming anyone's weapon.

Supporting figures

Mr. Briney and Nami

Their rescue gives the player transportation to Dewford and Slateport. They translate an early act of kindness into concrete progress and reinforce the story's recurring principle that helping individuals creates the path forward.

Captain Stern

Stern connects Devon's delivery mission, the museum confrontation, oceanic research, and the stolen submarine. News of a remarkable discovery unexpectedly draws him to the museum, where Aqua already knows to intercept him and the Goods. His work later unintentionally supplies Aqua with the route to Kyogre.

The Mt. Pyre keepers

They preserve the ancient history, safeguard the Orbs, identify the chosen-one tradition, provide the Magma Emblem, and frame the Nightmare Realm encounter.

Gym Leaders

The Gym Leaders primarily chart the player's growing capability. Calendula and Stella have major dramatic roles beyond this structure; the remaining Leaders serve as regional milestones and representatives of the normal Hoenn the player is protecting.

7. Relationship map

| Relationship | Story function | |---|---| | Player ? Acacia | Investigator and scientific mentor
 | | Player ? Calendula | Student and protective mentor; later formal Gym opponents | | Acacia ? Calendula | Research and romantic partners with complementary scientific roles | | Player ? Rival | Parallel growth, field research, and recurring friendly competition | | Player ? Luka | Friendship, repeated testing, and shared pursuit of the comet mystery | | Player ? Aurora | Gifted student and cryptic supernatural teacher | | Player ? Jirachi/Celebi | Chosen mortal and legendary partners maintaining the timeline | | Player ? Stella | Fellow investigator, crisis partner, and eventual Champion opponent | | Stella ? Mr. Stone | Granddaughter and grandfather; partnership/control thematic opposition | | Magnus ? Inae | Ideological enemies who discover they were manipulated by the same patron | | Inae ? Alejandro | Strategic leader and operational captain | | Mr. Stone ? Aqua/Magma | Hidden financier using both organizations as disposable instruments | | Luka ? original broken reality | Source of his unexplained dreams, familiarity with the player, and temporal sensitivity |

8. Information and reveal schedule

What the player learns early

- Groudon and Kyogre devastated the player's original world.
- The player reached Jirachi and used the Millennium Comet to wish the partially restored reality into existence.
- The repaired world is not completely stable.
- Acacia suspects reality changed.
- Aurora believes the player carries unusual energy.
- Luka feels that he already knows the player despite having no conscious memory of the original reality.
- Magma and Aqua are pursuing ancient power.
- Stella reacts uneasily to a private request in Mr. Stone's Letter.
- The timing of the Devon Goods robbery and the improbable security breach suggest that the theft was facilitated.

What the player learns at the midpoint

- The gift allows entry into nightmare rifts.
- Luka and the rival possess lesser temporal sensitivity, while Aurora has knowledge and only a diluted version of the full gift.
- Restoring time erases ordinary people's memories.
- The nightmare corruption comes from the original broken reality that the wish did not fully heal.
- Comet-linked meteorites retain unexplained energy.
- Acacia detects destabilization around Mt. Chimney while Aqua and Magma operate there.
- Aqua is controlling regional infrastructure, not merely stealing isolated objects.
- Seabreeze records connect Devon money and equipment to coded clients representing both villain teams.
- Both teams are converging on the sacred Orbs.

What the player learns late

- Shadow Jirachi and Celebi are the original broken reality's grief given form.
- The titans cannot be controlled through ideology or possession alone.
- The wrong-Orb awakenings were not merely mistakes; Devon fed both teams false information.
- Mr. Stone funded the entire conflict.
- Stella is his granddaughter and the Champion.
- Mr. Stone values economic domination above both ideology and human relationships.
- Mr. Stone dies when his attempt to control the Primal titans fails.
- Rayquaza, not another human control mechanism, is the answer to the titan conflict.

9. Themes and recurring motifs

Memory

The player originates in a world that most inhabitants of the repaired reality cannot remember. Luka dreams what he cannot consciously recall and feels familiarity without knowing its source. The Meteorite itself is described as remembering a forgotten world. Memory is therefore both evidence and burden.

Wishes versus choices

The player's wish genuinely creates a better reality, but it cannot make that reality whole or keep it safe by itself. The future survives because the player continues choosing to help at every stage. A wish creates possibility; sustained relationships and actions preserve it.

Research versus exploitation

Acacia, Calendula, and Stella study the unknown in order to understand it. Mr. Stone studies the same mysteries in order to own them. The difference is ethical, not intellectual.

Inheritance

The story contains several forms of inheritance:

- Ancient disasters inherited by the present.
- The Stone family's obsession with minerals and power.
- Stella's relationship to Devon and her grandfather.
- The player's inheritance of responsibility from their original broken world.
- Luka's possible inheritance of temporal echoes.

Control versus partnership

Mr. Stone wants gods to obey him. Magnus and Inae treat the titans as instruments of ideology. The player succeeds through partnership with ordinary Pokemon, human allies, and legendary beings.

Parallel rivals

The rival and Luka reflect different aspects of the player:

- The rival follows the same formal Trainer and research path.
- Luka follows the emotional and supernatural trail of the comet.
- Stella represents the accomplished destination of the Trainer path.
- Aurora represents the dangerous isolation of the gifted path.

10. Continuity decisions required before final story polish

1. How are the Orbs recovered from Mr. Stone?

Mr. Stone has both Orbs aboard the Devon boat when he dies, yet Magnus and Inae later possess and return them. Add an explicit recovery event after his death.

Cleanest option: The destruction surrounding Stone's failed attempt throws the Orbs clear of the boat or leaves them in floating wreckage. Magnus and Inae recover them after Rayquaza calms the titans, allowing them to return the Orbs to Mt. Pyre.

2. How much does the player consciously remember after the wish?

The prologue is established history: the ruined world is the player's original reality, and their wish creates the partially restored world. What remains unclear is whether the player consciously remembers all of that history immediately after waking, initially interprets it as a dream, or recovers the meaning as the rifts open. Later dialogue should use one consistent level of awareness.

3. What causes different degrees of temporal sensitivity?

The current scripts establish a spectrum: the player has the potent gift, Aurora has knowledge and a diluted version of it, and Luka and the rival are unusually sensitive without possessing the full ability. Decide whether this sensitivity comes from living in the original reality, proximity to the wish, inherited traits, contact with the comet, or some combination.

4. Why do the rifts open in those locations?

Petalburg and Mt. Pyre should have explicit causal triggers. Possible causes include comet-energy concentrations, nearby Time Gears, use of the Orbs, or human interference with meteorite energy.

5. How does the villain plot worsen the temporal plot?

The strongest unified answer is that comet energy, Orb resonance, and titan awakenings strain the already repaired timeline. Calendula can discover this scientifically before the climax.

6. How much of Devon is involved?

The Seabreeze records establish a financial and logistical connection, but it remains unclear whether the conspiracy belongs solely to Mr. Stone and a secret inner circle or implicates Devon's leadership more broadly. The story should distinguish complicit executives from ordinary employees who are genuine victims.

7. What was Mr. Stone using the player and Stella for?

The Letter, Devon Goods delivery, DexNav, rewards, and repeated access to Devon resources now read as possible manipulation or surveillance. Clarify which actions were sincere, which moved the player or Stella into useful positions, and why Stone continues helping the player after they repeatedly disrupt his operations.

8. Why does Mr. Stone believe he can control the titans?

Define the research, device, or false assumption that convinces Stone both Orbs will allow him to command Groudon and Kyogre. His plan should be dangerously arrogant but internally rational rather than knowingly suicidal.

9. What is the exact Aqua hierarchy?

State clearly that Inae is the leader and Alejandro is a captain or senior operations commander. Their first scenes should establish this without relying on later context.

10. What is the player's family relationship to Acacia and Calendula?

The intended scripts establish Acacia and Calendula as romantic and research partners. Legacy text refers to the Petalburg Leader as the player's father. Decide whether either woman is also the player's parent, whether both are guardians, or whether they are unrelated mentors. Then standardize every reference.

11. How does Aurora's arc end?

Aurora needs a final response to the events she predicted. Her conclusion should clarify whether her belief in the comet was vindicated, revised, or challenged.

12. What does Luka finally understand about his dreams?

Victory Road is the natural place to reveal whether the dreams were temporal echoes and whether restoring balance changed them.

13. What is Stella's emotional resolution?

Her Champion dialogue should address:

- Her grandfather's betrayal.
- Her grandfather's death at Sootopolis.
- The corruption of Devon.
- His dismissal of her accomplishments.
- Why she still believes Pokemon partnership matters.
- Why the player is worthy to inherit responsibility for Hoenn.

14. Legacy dialogue cleanup

Late scripts still contain player-facing references to Wallace, Archie, Maxie, Steven, Brendan, Wally, and the player's "father." These should be systematically replaced with Stella, Inae, Magnus, Zenno or Zinnia, Luka, and the final chosen family terminology.

11. Recommended three-act writing structure

The playable story contains many regional episodes, but its dramatic spine can be summarized in three large movements.

Act One - The world has already ended once

- The player journeys through their original ruined world and wishes the partially restored reality into existence.
- Acacia's investigation.
- Luka's familiarity, dreams, research obsession, and early battles.
- Aurora's warning.
- Stella's titan painting and uneasy reaction to Mr. Stone's Letter.
- The suspiciously well-arranged Devon Goods and museum attacks.
- Meteorite theft and Mt. Chimney.
- Acacia detects the resulting destabilization.

Act turn: The Petalburg disaster proves the changed timeline is actively breaking.

Act Two - Everyone is trying to choose the future

- Aurora identifies the gifted player.
- Nightmare Petalburg establishes the cost and rules of restoration.
- Aqua's infrastructure campaign expands.
- Seabreeze's records expose Devon money, falsified equipment totals, coded destinations, and payments to both teams.
- Calendula studies comet energy.
- Aqua and Magma steal the Orbs.
- The Nightmare Realm reveals the source of the shadows.
- Mr. Stone's presence in the Magma mine links Devon to the conflict.

Act turn: Groudon and Kyogre awaken, proving that all three human power structures have lost control.

Act Three - Control or partnership

- Magma attacks the Space Center.
- Aqua awakens Kyogre.
- The titans clash in Sootopolis.
- Mr. Stone reveals himself and triggers the Primal Reversions.
- Mr. Stone dies when his attempt to control Groudon and Kyogre fails.
- The player awakens Rayquaza.
- The still-unexplained recovery of the Orbs allows Magnus and Inae to return them.
- Stella confronts what her family legacy means.
- The player defeats Stella and becomes Champion.

Final thematic answer: The player becomes responsible for Hoenn not because they acquired the greatest power, but because every stage of the journey proved they could be trusted not to possess what they protected.
